## Press Release

### Microvi Biotech Presents its Platform Water Decontamination Technology at the World's Best Technology Showcase

Overland Park, Kansas (March 10, 2006) -- Microvi Biotech, an environmental biotechnology company, announced today that it will be presenting information on its advanced water biotechnology at the World's Best Technologies Showcase (WBT) in Arlington, Texas. WBT will be held in the Arlington Convention Center from March 27- 29.

Unmatched with conventional processes, Microvi Biotech's technology provides a high level of control and stability over the encapsulated microorganisms that foremost extend their useful life by orders of magnitude over what is available in the industry today. Other features, including the manufacturing and process controls, create the solutions for water decontamination that are faster, better, longer-lasting, and cheaper. WBT is the premier event showcasing the world's largest collection of undiscovered technologies emanating from start-up companies, top universities, labs, and research institutions from across the country and around the globe. Participating technologies are selected by - and presented to - seasoned venture investors and Fortune 500 licensing scouts representing a variety of industries. "We are looking forward to presenting information regarding our advanced water purification systems to such an influential target audience," said Dr. Fatemeh Shirazi President & CEO".

#### **About World's Best Technology**

The WBT is designed to support the movement of world-class technologies from leading laboratories and universities into the marketplace by providing the opportunity for scientists, researchers, and technology entrepreneurs, Fortune 500 licensing professionals, and seed-stage venture capital investors to develop new relationships.

#### **About Microvi Biotech**

Microvi Biotech, LLC is a leading environmental biotechnology company that discovers, develops, manufactures, and commercializes innovative market-driven technologies for unmet needs in clean water. Anchored by a market-driven R&D philosophy, the company focuses on turning early-stage research and development into smarter, smaller, faster, and cleaner commercial products.
