Press Release

Microvi Biotech CEO to Speak at Strategic Opportunities in Water Technology Summit

Union City, California (February 1, 2010) — Microvi Biotech, Inc., a leader in providing advanced low-cost and waste-free water technologies and a winner of the Global 100 Cleantech award, recently announced that Dr. Fatemeh Shirazi, CEO of Microvi Biotech, will participate as a featured speaker at the Strategic Opportunities in Water Technology Summit. The conference will be held February 3-5, 2010, in San Jose, California.

Dr. Shirazi will present in a session titled “Water Technology Innovation Showcase” during which she will discuss Microvi Biotech's latest new technologies in the area of water and wastewater treatments. In her discussion, Dr. Shirazi will also discuss how Microvi’s technologies are rapidly penetrating into the market and replacing conventional waste-generating and costly treatment systems. The presentation will also highlight how her company has taken a fundamentally new approach to water treatment. Designed with the environment in mind, Microvi’s award-winning technologies consist of a single-step degradation process by which major pollutants are completely destroyed. The company’s technology portfolio encompasses all areas of the water industry, including small and large industrial wastewater, drinking water, surface water, groundwater, and municipal wastewater.

Dr. Shirazi will be joined by R&D leaders, CTOs, and venture capitalists, who will offer their views on what approaches they find most promising, how the companies with such technologies are being valued, and where the opportunities are for further innovations and/or commercialization.

Hosted by Infocast, the inaugural Strategic Opportunities in Water Technologies Summit will provide a forum for developers and vendors of water management and treatment technologies to hear about end-user markets and meet with buyers to learn their needs.

About Microvi Biotech Inc.

Microvi Biotech Inc, is a leading environmental biotechnology company that discovers, develops, manufactures, and commercializes innovative technologies for unmet needs in clean water and energy. Anchored by a market-driven research and development philosophy, the company focuses on turning early-stage R&D into smarter, smaller, faster, and cleaner commercial products. Apart from being featured in leading business magazines and newspapers, Microvi Biotech Inc. has received a number of awards, including the GoingGreen Award for two years in a row, the California Clean Tech Award, and the Red Herring 100 Award in North America.
