Press Release

Microvi Biotech to Present its State-of-the-Art Clean Water Technology at Cleantech Forum XXVI

Union City, California (Feb 25, 2010) -- Microvi Biotech will be presenting its state-of-the-art water technology at Cleantech Forum XXVI on February 25 in San Francisco, California. Microvi Biotech's platform technology is based on years of continuous discoveries and the research and development of advanced biotechnologies to effectively destroy many difficult pollutants in water resources.

Dr. Fatemeh Shirazi, President and CEO of Microvi Biotech, has been invited to present in the "CEO Showcase: Reaching New Depths in Water Treatment" session. Cleantech Forum XXVI San Francisco is one of the Cleantech's Group's five premier events each year across North America, Europe, China, and India. Since 2002, the Forums have provided insight, investment opportunities and unparalleled networking for the world's leading investors, growth companies, and global corporations. "The increased awareness regarding the shortage of clean water has become apparent and there is a high level of interest and demand for innovation within the water industry," said Dr. Fatemeh Shirazi President & CEO. "We are looking forward to presenting our breakthrough technology as it is among the first technologies to demonstrate naturally waste-free operation while providing attractive cost-savings".

About the Cleantech Forum XXVI

Since 2002, Cleantech Forums have been the world's premier industry events, bringing together global corporations, investors, entrepreneurs, government agencies and other decision-makers and influencers. Forums offer a comprehensive, multi-day agenda with a range of opportunities to learn and network. Attendees benefit from high-level contacts, the latest markets research, and thought leadership in the cleantech category.

About Microvi Biotech

Microvi Biotech Inc is a leading environmental biotechnology company that discovers, develops, manufactures, and commercializes innovative technologies for unmet needs in clean water and energy. Anchored by a market-driven research and development philosophy, the company focuses on turning early-stage R&D into smarter, smaller, faster, and cleaner commercial products. Apart from being featured in leading business magazines and newspapers, Microvi Biotech Inc. has received a number of awards, including the GoingGreen Award for two years in a row, the California Clean Tech Award, and the Red Herring 100 Award in North America.
